For immediate release

NORTHERN SUPERIOR IDENTIFIES BROAD HIGH-GRADE ZONE AT PHILIBERT WITH STRONG STEP-OUT RESULTS INCLUDING 31.0 METRES AT 1.94 G/T AU AND 19.7 METRES AT 2.03 G/T AU

Toronto, Ontario, Canada, March 25, 2025 – Northern Superior Resources Inc. (“Northern Superior” or the “Company”) (TSXV: SUP) (OTCQX: NSUPF) (GR: D9M1) is pleased to announce additional results from its 20,000 metres expansion drilling campaign at the Philibert gold property, located only 9 km from IAMGOLD Corporation (“IAMGOLD”)’s Nelligan project, and 60 km southwest of Chibougamau, Quebec (the “Philibert Project”: Northern Superior: 75%, SOQUEM: 25%¹).

Highlights Include (*Grades uncut; lengths measured along hole; Table 1*):

- **PB-25-475: 1.94 g/t Au over 31.0 metres located under current resource pit from the Grey Fox footwall (“FW”), and 1.73 g/t Au over 6.1 metres located under current resource pit from the Grey Fox hanging wall (“HW”);**
- **PB-25-477: 2.03 g/t Au over 19.7 metres; located below current resource pit from the Grey Fox FW; and**
- **New Core Area Outside of Current Resource Pit: The holes reported today, PB-25-475 and PB-25-477, coupled with previously reported hole PB-25-476, which intersected 2.89 g/t Au over 10.6 meters (see press release dated March 3, 2025), outline a new core area with all holes intersecting the Grey Fox FW zone along a strike of 150 metres and up to 200 metres vertically; all 3 holes are outside the current resource pit; this target remains open along strike and at depth.**

"Today’s exciting results, including **1.94 g/t over 31 metres** in hole PB-25-475 and **2.03 g/t over 19.7 metres** in hole PB-25-477, continue to demonstrate the expansion potential of the Philibert deposit with three holes (475, 476, and 477) returning robust grades and excellent continuity beyond the current pit shell. These results further strengthen the steady progress made in expanding the mineralization at the southeastern extent of the pit, where we recently reported significant on-strike mineralization outside of the current 3 km-long resource pit, including **2.60 g/t over 26.5 metres** in hole PB-24-448 and **3.59 g/t over 7.7 metres** in hole PB-24-450, located approximately **200 metres and 800 metres east of the resource pit, respectively**. These findings support the strong expansion potential beyond the current resource of 1,708,800 oz inferred at 1.1 g/t and 278,900 oz indicated at 1.1 g/t.⁵ The continued progression of Philibert reinforces its position as a cornerstone of the rapidly emerging Chibougamau Gold Camp," said Simon Marcotte, President and Chief Executive Officer.

¹ Northern Superior has the option to acquire from Soquem the remaining 25% (to own 100%) of the Philibert Project for a cash payment of CAD\$3.5 million.

Unlocking Higher-Grade Gold Historically Considered Underground

A 1991 study evaluating the economic potential of the Philibert Project focused exclusively on underground resources in the western domains, identifying approximately 239,000 ounces at 5.68 g/t gold (this resource is not NI 43-101 compliant).² In contrast, the mineral resource estimate published by Northern Superior in 2023 did not include any underground potential, as it was limited to an open-pit assessment.

As the Company continues to successfully expand the Philibert mineralization, widening the pit not only increases its lateral extent but consequently allows for greater depth. An expanded pit design with greater depth could enable the capture of higher-grade mineralization, which was so far considered to have underground potential only (*see Figure 3 and Figure 4*). The disseminated mineralization, occurring over broad widths with significant grades—along with higher-grade shoots as identified in drill holes from this release—is being analyzed using new geological and structural data to refine the mineralization model and identify potential resource expansions.

Drilling Results

Drill holes PB-25-475 and PB-25-477 successfully targeted the Grey Fox FW zone approximately 80 metres below the current resource pit, 175 metres vertical depth, and 150 metres along strike. These results confirm that mineralization extends at depth and along strike, demonstrating both higher-grade intervals and broader zones of lower-grade mineralization. (*See Figure 1 for a plan map of the drilling and Table 1 for a list of significant results.*)

² Historical information : Roche Ltée., (1991) *Économique, Propriété Philibert. Projet: 11044-001.*

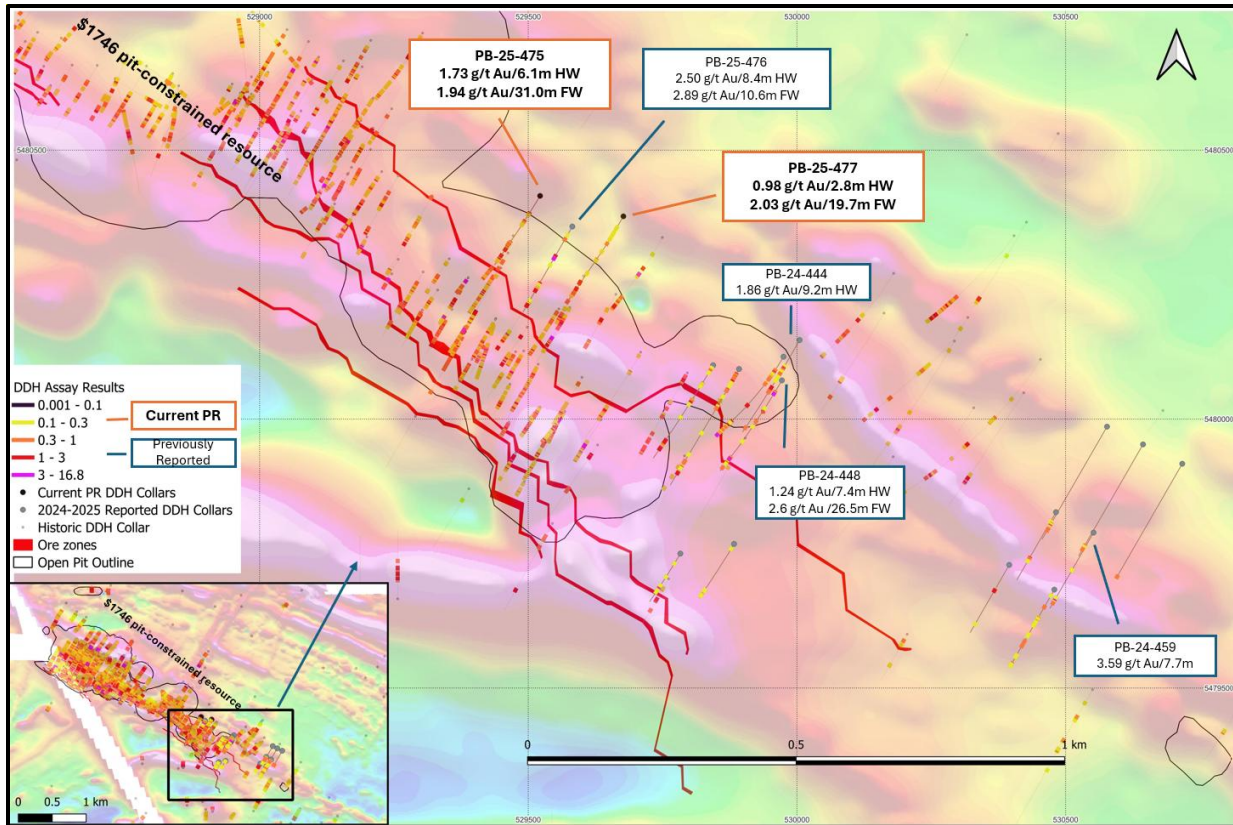

Figure 1: Plan Map of Philibert 2024 Diamond Drilling

Drill hole PB-25-475 returned **1.94 g/t Au over 31.0 metres**, including **5.93 g/t Au over 2.0 metres**, **5.01 g/t Au over 3.0 metres**, and **28.0 g/t Au over 1.0 metre** from the Grey Fox FW zone. This interval is approximately 150 metres along strike from PB-25-477, which returned **2.03 g/t Au over 19.7 metres**, including **5.02 g/t Au over 7.1 metres**. Previously reported hole PB-25-476, located between PB-25-475 and PB-25-477, returned **2.89 g/t Au over 10.6 metres**, including **5.15 g/t Au over 5.3 metres** from the Grey Fox FW (see press release dated March 3, 2025). These results demonstrate impressive continuity with significant grades and widths. Mineralization in the footwall is hosted within the siliceous phase of the Philibert gabbro seam, characterized by pervasive silica and quartz-veining with variable amounts of ankerite, sericite, and disseminated pyrite-pyrrhotite (1–15% abundance). (See Figure 3 for a longitudinal view of the FW zone, Figure 4 for a section view, and Figure 6 for a core photo of PB-25-477.)

The interpreted Grey Fox HW zone was tested with hole PB-25-475, which returned **1.73 g/t Au over 6.1 metres**, including **4.99 g/t Au over 1.4 metres**. Previously reported drill hole PB-25-476 returned **2.5 g/t Au over 8.4 metres**, including 6.47 g/t Au over 1.7 metres, while PB-25-477 returned 0.98 g/t Au over 2.8 metres. The drill holes were primarily designed to test beneath the resource pit of the FW zone rather than target hanging wall mineralization. Mineralization in the HW zone represents a litho-structural contact between the Philibert gabbro seam and mafic volcanics, and locally with interbedded sediments, including graphitic argillite. The zone exhibits strong deformation, fracturing, and sulphide mineralization

with smoky quartz and quartz-tourmaline veins. (See Figure 4 for a section view, and Figure 5 for a longitudinal view of the HW zone.)

Today's drilling results continue to highlight the potential to expand the pit northward by incorporating the HW zone, while also extending mineralization at depth within the FW zone. Although the FW zone is better understood, the geological team is actively studying the HW and their structural relationships to refine and enhance the mineralization model.

Table 1: Significant Drill hole Intersections

DDH ID	From (m)	To (m)	Width (m)	Au Final (g/t)	Metal Factor (g/t x m)	Zone	Press Release
PB-25-475	76.5	82.6	6.1	1.73	10.6	Grey Fox HW	Current
including	79.1	80.5	1.4	4.99	7.0	Grey Fox HW	Current
and	111.0	126.0	15.0	0.23	3.5	Grey Fox HW	Current
and	204.0	235.0	31.0	1.94	60.1	Grey Fox FW	Current
Including	204.0	206.0	2.0	5.93	11.9	Grey Fox FW	Current
and including	214.0	217.0	3.0	5.01	15.0	Grey Fox FW	Current
and including	231.0	232.0	1.0	28.00	28.0	Grey Fox FW	Current
PB-25-476	98.6	107.0	8.4	2.50	21.0	Grey Fox HW	March 3, 2025
including	98.6	100.3	1.7	6.47	10.7	Grey Fox FW	March 3, 2025
and	203.0	214.6	10.6	2.90	30.7	Grey Fox FW	March 3, 2025
and	257.2	264.6	7.4	0.83	6.1	Grey Fox FW	March 3, 2025
PB-25-477	145.7	148.5	2.8	0.98	2.8	Grey Fox HW	Current
and	247.3	267.0	19.7	2.03	40.0	Grey Fox FW	Current
including	256.7	263.8	7.1	5.02	35.6	Grey Fox FW	Current

Intersections are determined using 0.2 g/t Au cut off and no more than 10 metres of consecutive dilution. Grades are presented uncut. If an intersection is 1 metre or less dilution under 0.2 g/t Au may be used to determine a 2-metre intersection.

The Chibougamau Gold Camp

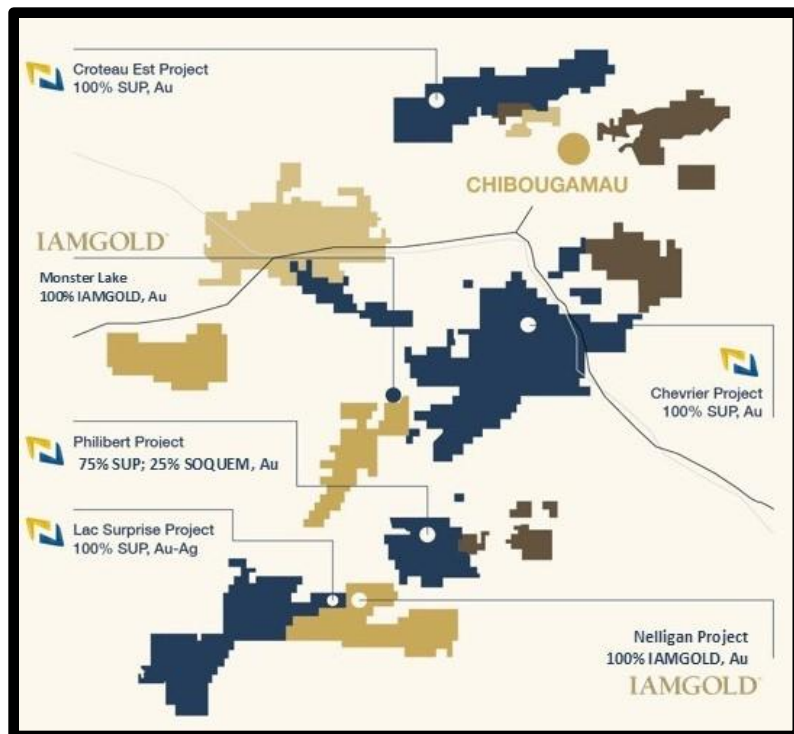

The Chibougamau Gold Camp is rapidly emerging as one of the world's most sought-after gold destinations with several complementary gold resources reaching viable scale. In recent years, these critical assets were divided amongst five different companies. Today, largely due to Northern Superior's acquisitions and corporate transactions,³ ownership has been streamlined, with only IAMGOLD and Northern Superior holding these assets. The proximity of these deposits to each other makes them ideally suited to feed a single mill, and their consolidation enhances their viability, thereby increasing their value.

Below is a table showing the resources of the camp having been formalized to date.

Nelligan 100% IMG		Indicated: Inferred:	3,125,000 oz 5,161,000 oz	0.95 g/t 0.96 g/t
Philibert 75% SUP; 25% Soquem		Indicated: Inferred:	278,900 oz 1,708,800 oz	1.10 g/t 1.10 g/t
Lac Surprise 100% SUP		<i>Interpreted as the western extension of Nelligan New High-Grade Lens of Nelligan Developing Towards Lac Surprise</i>		
Monster Lake 100% IMG		Indicated: Inferred:	84,200 oz 488,500 oz	11.00 g/t 14.40 g/t
Chevrier 100% SUP		Indicated: Inferred:	260,000 oz 652,000 oz	1.26 g/t 1.29 g/t
Croteau 100% SUP		Inferred:	640,000 oz	1.73g/t

Note: see NI-43-101 information below in notes 4, 5, 6, and 7.

³ Including Northern Superior acquisitions of Genesis Metals Corp. and Royal Fox Gold Inc.

Qualified Person (“QP”)

The technical content and drilling results contained in this news release have been prepared in accordance with National Instrument 43-101 Standards of Disclosure for Mineral Projects (“NI 43-101”) and have been reviewed and approved by Ms. Melanie Pichon, P.Geo., Senior Geologist for Northern Superior. Ms. Pichon is a QP under the NI 43-101 and is not considered independent.

Northern Superior adheres to strict protocols following the NI 43-101 best practices when conducting exploration works. Sampling and assay results are monitored with a strict QAQC protocols. Drilled core is processed and assayed in Northern Superior’s facilities in Chapais, Quebec. Core samples (half core) are transported to Agat Laboratory in Val d’Or. Samples are analyzed by fire assay with a 50-gram charge with an Atomic Absorption (AA) finish. Samples returning assay values over 10.0 grams are re-assayed with a gravimetric finish. QAQC consists of 4% of blank material, certified standards and duplicates inserted in the assay sequences by Northern Superior.

About Northern Superior Resources Inc.

Northern Superior is a gold exploration company focused on the Chibougamau Camp in Québec, Canada. The Company has consolidated the largest land package in the region, with total land holdings currently exceeding 62,000 hectares. The main properties include Philibert, Lac Surprise, Chevrier, and Croteau. Northern Superior also owns 62% of ONGold Resources Ltd. (TSXV: ONAU) which is advancing promising exploration assets in Northern Ontario and Manitoba, including the district scale TPK Project and Monument Bay; Agnico Eagles Mines Limited owns 15% of ONGold Resources Ltd.

The Philibert Project is located 9 km from IAMGOLD Corporation's Nelligan⁴ Gold project. Philibert hosts a maiden 43-101 inferred resource of 1,708,800 ounces Au and an indicated resource of 278,900 ounces of Au.⁵ Northern Superior holds a majority stake of 75% in the Philibert Project, with the remaining 25% owned by SOQUEM, and retains an option to acquire the full 100% ownership of the project. Chevrier hosts an inferred mineral resource of 652,000 ounces Au (underground and open pit) and an indicated mineral resource of 260,000 ounces Au.⁶ Croteau hosts an inferred mineral resource of 640,000 ounces Au.⁷ Lac Surprise hosts the Falcon Zone Discovery, interpreted to be the western strike extension of IAMGOLD Corporation's Nelligan Gold project.

Northern Superior is a reporting issuer in British Columbia, Alberta, Ontario and Québec, and trades on the TSXV under the symbol SUP and the OTCQB Venture Market under the symbol NSUPF. For further information, please refer to the Company's website at www.nsuperior.com or the Company's profile on SEDAR+ at www.sedarplus.ca.

About SOQUEM

SOQUEM, a subsidiary of Investissement Québec, is dedicated to promoting the exploration, discovery, and development of mining properties in Québec. SOQUEM also contributes to maintaining strong local economies. Proud partner and ambassador for the development of Québec's mineral wealth, SOQUEM relies on innovation, research, and strategic minerals to be well-positioned for the future.
